

## MRT Information

Name: \_\_\_\_\_ First name: \_\_\_\_\_

### Patient Information Sheet

#### Dear Patient!

You are referred for conducting an MRT examination. To this end, we want to give you some information and ask you to answer the some important questions that follow...

1. The Magnet resonance tomography (MRT) creates slice images of the body within a magnetic field without radiation exposure. The examination is divided generally in multiple imaging sequences, which can take up to 15 minutes. The total examination time is usually about 20 - 30 minutes.  
For specific questions or difficult examination conditions, examination times are possible up to 1 hour. While the examination you will hear load knocking sounds intermittently, which can induce a varying noise pollution, depending on measurement sequences
2. Because of the powerful magnetic field, there are some important contraindications that must be considered carefully before entering the examination room.  
We therefore ask the following questions thoroughly answered (please check the appropriate option):
  - Do you wearing a pacemaker or insulin Pump or one of the electromagnetic carrier?  
 yes  no
  - Are there metallic parts (e.g. shrapnel, - surgery clips) in your body?  
 yes  no
  - Do you wearing metallic prosthesis (e.g. joint prosthesis, implants in the ears or vascular stents)?  
 yes  no
  - Did you ever undergo vascular surgery (e.g. brain, main abdominal or leg vessels) or heart surgery (eg. bypass, heart valve)?  
 yes  no
  - Do you have a cgm (continuous glucose monitoring)?  
 yes  no

Please enter your body weight: \_\_\_\_\_ kg

## MRT Information

3. In very rare cases may occur thermal combustion circumscribed, caused by the metalliferous contaminant (tattoos, certain eye shadows, piercing or similar), which was applied in or on the skin. In our practice we have not observed such a complication yet.
4. Before examination is by all means indispensable to deposit all sorts of metal items, e.g. removable dentures, jewelry, piercing, keys, lighters, coins, watches, hearing aids eyeglasses etc. in the cubicle. Also, credit cards or similar items provided with magnetic strips to be left in the cubicle.
5. Depending on the examination, it may be necessary to administer a contrast medium injection. Adverse reactions associated with contrast medium for the MRI are known, but they happen very rarely and then usually show itself with low-grade and fast transient discomfort (a sensation of warmth, nausea, vomiting, itching). Serious adverse reactions (e.g. dyspnoea, Circulatory failure etc. were observed in rare cases. Please answer the following questions:
  - Are any allergic diseases or allergies known by you?  
 yes  no
  - If yes: which ones?  
 -----
  - Have you ever had a contrast medium injection in the MRI?  
 yes  no
  - If yes: was it well tolerated by you?  
 yes  no
6. To be completed by **Female Patients** only:
  - Are you using the Intra-uterin-pessar (Spiral)?  
 (If yes, we recommend following the MRI, a gynecological examination to check the correct position of the IUP)  
 yes  no
  - Is there a possibility that you might be pregnant?  
 yes  no

## MRT Information

7. If there are questions or confusion on your part, please ask our staff **before entering** the examination room. We ask you to confirm by your signature, that you read and understood the information above fully and that you have answered the questions to the best of your knowledge.
